# Doctoral Programme in Information Engineering

**Director prof. Fabio Schoen**

## Industrial Doctoral Programme

**XXXVII cycle – academic year 2021/2022**

<table>
<thead>
<tr>
<th>TECHNOLOGICAL AREA</th>
<th>Department of Information Engineering</th>
</tr>
</thead>
<tbody>
<tr>
<td>ADMINISTRATIVE OFFICE</td>
<td>Department of Information Engineering</td>
</tr>
</tbody>
</table>
| CURRICULA | 1. Control, Optimization and Complex Systems  
2. Electronics, Electromagnetics and Electrical Systems  
3. Computer Engineering  
4. Telecommunications and Telematics |

## Positions Available: 13

- Positions with Scholarship: 8  
- Industrial Doctoral positions: 3  
- Positions without Scholarship: 2*  

*standard ranking only*

| RANKING LIST FOR STANDARD POSITIONS  
SCHOLARSHIPS AVAILABLE: 6 | University of Florence |
|---------------------------|----------------------|
| RANKING LISTS FOR  
POSITIONS WITH SPECIFIC  
RESEARCH TOPICS  
SCHOLARSHIPS AVAILABLE: 2 |  
1 - Esaote S.p.A.  
**Thematic:** “High-frame-rate volumetric echography based on 4D-Beamforming and Advanced Doppler: processing and system aspects”.  
2 - Tradeit Holding B.V.  
**Thematic:** “Cross-cultural modeling of prodromes, impacts, and mediators/moderators of digital gaming activities on gamers”. |

| RESERVED POSITION  
INDUSTRIAL DOCTORAL PROGRAMME: 3 | Reserved positions for Imaginalis s.r.l. employees |

| STUDY/RESEARCH PERIODS ABROAD | Not mandatory |

| DOCUMENTS REQUIRED FOR  
THE ADMISSION  
(under penalty of exclusion) |  
- Copy of the Identification Document  
- Self-declaration for qualifications (bachelor’s/Master’s/combined cycle degree) obtained in Italy with a list of all exams taken and their mark, title of the thesis and graduation mark  
(download the form [here](#) make sure you fill in all the fields) |
Foreign qualification required to access with a list of all exams taken and their mark, title of the thesis and graduation mark.

The same documentation except for the final mark must be submitted by those who will graduate by 31/10/2021

</thead>
<tbody>
<tr>
<td><strong>MANDATORY</strong></td>
</tr>
<tr>
<td>● Curriculum vitae including a list of publications and of the other qualification documents (if any)</td>
</tr>
<tr>
<td>● Abstract of the Master Thesis</td>
</tr>
<tr>
<td>● Research proposal</td>
</tr>
<tr>
<td><strong>OPTIONAL</strong></td>
</tr>
<tr>
<td>● Copy of the Master Thesis (or equivalent)</td>
</tr>
<tr>
<td>● Publications (if any)</td>
</tr>
</tbody>
</table>

RESEARCH PROJECT

The proposal must be in .pdf format, written either in Italian or in English. The proposal should describe a three-years project having a high potential for novel scientific contributions in the broad field of Information Engineering, but also in other fields provided that methodologies and/or technologies of Information Engineering are exploited. The proposal must include the specific reference to the curriculum and the chosen area of study listed in the below section “Thematics”.

EVALUATION PROCEDURE

● Evaluation of curriculum vitae, research project, academic career, publications and other qualification documents

● Interview

As detailed in the section below “Evaluation Marks”.

OTHER LANGUAGE FOR THE INTERVIEW

English

INTERVIEW MODE

Remotely (videocall)

FURTHER INFORMATION

The interview will primarily concern a discussion on the research proposal presented by the candidate.

<tr>
<td>Curriculum vitae, publications, qualification documents</td>
</tr>
<tr>
<td>Research proposal</td>
</tr>
</tbody>
</table>

Applicants who obtain a mark of at least 54/120 according to the minimum score for each parameter will be admitted to the interview

Interview: (including a discussion of the research proposal) 26/120 40/120

Eligibility is achieved with a minimum score of 80/120
Control, Optimization and Complex Systems

AREA 1 – CONTROL SYSTEMS: concerns analysis, modelling and synthesis of high-performance (possibly networked and hence subject to cyber attacks) automatic control, supervision and monitoring systems for processes that are only partially known, possibly distributed in space and subject to constraints, such as those encountered in industrial applications, robotics, bio-engineering, aerospace, electrical systems, etc.

AREA 2 – OPTIMIZATION: Concerns the study of Operations Research models and applications, the development and the analysis of efficient optimization algorithms for the solution of complex problems and the interaction between data science and optimization. The applications of optimization can be found in the field of automation, in industrial production, from logistics to transportation, to the supply-chain, in the management of electrical energy networks and in training machine learning systems.

AREA 3 – COMPLEX SYSTEMS: this research area is suitable for applicants with a strong background in Physics, Chemistry, Mathematics or Engineering who are willing to carry out research work of cross-disciplinary type. Training aims to deepen the more formal aspects of the analysis of complex systems. The research topic can concern methodological aspects, from dynamical systems to stochastic processes, including complex networks and their applications, from computer engineering to life science.

Electronics, Electromagnetics and Electrical Systems

AREA 1 – HIGH-FREQUENCY ELECTRONICS: concerns the analysis and design of electronic devices and systems at high frequency (from radio frequency to millimeter waves).

AREA 2 – DIGITAL ELECTRONIC SYSTEMS: concerns the analysis and design of electronic systems based on advanced digital components, with applications from biomedical to radar fields.

AREA 3 – ELECTROMAGNETICS: concerns the use and development of numerical techniques for the analysis and design of radiant systems and passive devices at high frequency, from some GHz up to optical frequencies.

AREA 4 – ELECTRICAL SYSTEMS: concerns the critical and comparative analysis of control techniques for electrical drives with the development of innovative algorithms, the automation of power systems, with particular reference to the “power quality” in distribution networks, to the “smart-metering” and fault diagnosis in electrical systems.

Computer Engineering

AREA 1 – METHODS AND TECHNOLOGIES OF SOFTWARE: concerns methods of design, examination and evaluation of complex software systems, with further details on formal methods and advanced software architectures.

AREA 2 – MULTIMEDIA AND COMPUTER VISION: concerns the design and implementation of multimedia data processing systems, automatic image and video interpretation, 3D data elaboration, automatic image and video annotation, media search from databases and internet, smart computing and intelligent environments for advanced human-machine interaction, surveillance, robotics.
AREA 3 – ARTIFICIAL INTELLIGENCE AND BIOINFORMATICS: is mainly focused on algorithms and architectures for machine learning, with special emphasis on relational and structured data, kernel methods, neural networks, bioinformatics applications, neuroinformatics, chemoinformatics, image recognition and methods for electronic publishing.

AREA 4 – DISTRIBUTED SYSTEMS AND DATA ENGINEERING: it concerns the study of distributed, parallel and complex processing systems wherein distributed architecture, performance and data complexity issues are integral part of the problem, such as for instance in applications for big data, smart cities, smart clouds, internet-of-things, smart manufacturing, etc.

Telecommunications and Telematics

AREA 1 – ALGORITHMS AND TECHNOLOGIES FOR SIGNAL PROCESSING: concerns processing methods and techniques of mono/multidimensional signals for the extraction of information and the efficiency of their representation in transmission and storage.

AREA 2 – TRANSMISSION SYSTEMS: concerns methods and techniques for efficient generation, transmission and disclosure of information through future terrestrial and satellite transmission channels.

AREA 3 – TELECOMMUNICATION NETWORKS: concerns methods and techniques for efficient transfer of information from source to destination through complex and advanced communication networks and related communication network applications.

AREA 4 – TELEMATICS AND INFORMATION SOCIETY: this cross-disciplinary area involves the applications of ICT technologies considered as key-enabling in different scientific and application domains. It requires a multi-disciplinary background in order to cope with the large variety of services and applications of telematics. The domains of interest include: telecommunications, communication, political and socio-economic sciences including all areas of the “Societal Challenges” of the European programme H2020.
